Homework Lection 4

TODO

Task 1

Write a code that implements the following functionality:
- username request (popup)
- checking username for the contents of numbers
  - in the absence of numbers, display the name backwards
  - in the presence of numbers in the name, translate letters and numbers through a symbol to upper or lower case
- place all this in a js-file connected to the created empty html page

Task 2

Create a page with 2 buttons and implements the following functionality:
- When you click on the first - go to another (any) page
- When you click on the second - deleting the content from the page and drawing any layout with flexbox
